USGS AppEEARS Extract Explore Help Sign In

Welcome to *App*EEARS!

Application for **E**xtracting and **E**xploring **A**nalysis **R**eady **S**amples (***App*EEARS**)

The Application for Extracting and Exploring Analysis Ready Samples (***App*EEARS**) offers a simple and efficient way to access and transform geospatial data from a variety of federal data archives. *App*EEARS enables users to subset geospatial datasets using spatial, temporal, and band/layer parameters. Two types of sample requests are available: point samples for geographic coordinates and area samples for spatial areas via vector polygons. Sample requests submitted to *App*EEARS provide users not only with data values, but also associated quality data values. Interactive visualizations with summary statistics are provided for each sample within the application, which allow users to preview and interact with their samples before downloading their data. Get started with a sample request using the Extract option above, or visit the Help page to learn more.

Landsat Simple Composite * Get Link Save Run Reset

```
// The asFloat parameter gives floating-point TOA output instead of
// the UINT8 outputs of the default simpleComposite().
var composite = ee.Algorithms.Landsat.simpleComposite({
  collection: l8.filterDate('2015-1-1', '2015-7-1'),
  asFloat: true
});

// Pick a spot with lots of clouds.
Map.setCenter(-44.9991, -21.2424, 12);
// Display a composite with a band combination chosen from:
// https://landsat.usgs.gov/how-do-landsat-8-band-combinations-differ-landsat-7-or-landsat-5-satel
Map.addLayer(composite, {bands: ['B6', 'B5', 'B4'], max: [0.3, 0.4, 0.3]});
```
